AI Engineer with 6+ Yrs of Exp
Advanced speech models in Germany
worked at SAMSUNG, Quoori

When I began my journey in technology fresh out of IIT and later working in Germany, I’ve seen the world transforming with technology. Today, technology powers healthcare, finance, governance, and communication, almost every part of life.

I’ve seen this transition not just from the outside, but from the inside as someone who has built systems, worked with global teams, and witnessed how rapidly skills and tools evolve.

But one thing hasn’t changed fast enough:
The way we prepare students for this tech world.

India produces 15 lakh engineering graduates every year, yet only 16% get placed, and just 2% reach roles above 8 LPA. The reason isn't talent; it's an outdated, theory heavy education system that hasn't kept pace with modern skills. Fundamentals matter deeply but they must be paired with hands-on experience, problem-solving, and exposure to real technology.

This gap is what led us to start Bosscoder Academy five years ago. We created learning systems that combine fundamentals with mentorship from top engineers, real-world projects, and industry aligned skills. We saw thousands of professionals transition into better roles, crack product companies, and build meaningful careers not through shortcuts, but through the right kind of learning.

With Bosscoder School of Technology, we're taking that mission to the foundation not after graduation, not during placements, but from day one of a student's B.Tech journey. We want students to grow into engineers while they're learning, not restart their journey after college.

This isn't just about teaching coding or getting placements. It's about enabling a generation of builders who can innovate, solve problems, and shape the future.

Computer Science is in huge demand, but skilled engineers are still rare

Look around! Every app, website, payment, food order, video call, and game works because of good software engineers. The world will need millions more engineers to build and improve these technologies in the coming years. That's why so many students choose Computer Science after Class 12, aiming for a strong and future-proof career.

The demand for CS talent is rising, but the industry still struggles to find engineers with the right skills and industry-aligned expertise. Unfortunately, a degree by itself is often not enough, as many college curricula have not kept pace with how industries actually hire and work.

Today, 15 lakh engineers graduate each year, out of which only 16% are placed, and only 2% secure roles with packages above 8 LPA.

*Estimates from Microsoft's white paper on "Digitization Capacity of the World Economy".

Introducing Bosscoder School of Technology

A 4-year B.Tech in Computer Science & Artificial Intelligence designed to bridge the gap between modern academics and real-world engineering so students graduate as skilled, industry-ready engineers.

We carefully focus on these 4 main points at BST:

1. Industry-Aligned Curriculum

Students follow an industry-relevant curriculum designed by engineers working at top tech companies, continuously updated to match real-world demands and future tech roles.

2. Practitioner-Led Faculty

At BST, students learn directly from engineers who have worked at top tech companies in their past, who bring real-world experience into the classroom.

3. Immersive Tech Ecosystem

A modern campus, located inside a tech park in Bengaluru, the campus offers a vibrant tech environment with leading companies around, providing strong networking opportunities and facilities that support holistic development including sports and extracurriculars.

4. Strong Career Outcomes

BST offers a recognized B.Tech degree with strong placement support, BST has 500+ hiring partners, guidance for higher studies, and opportunities to pursue entrepreneurship.

3 Core Pillars of Industry-Ready Learning at BST

Every pillar is built to help students move from learning concepts to applying them confidently. Focusing on hands-on practice, personalized mentorship, and clear career outcomes. We want to make you industry-ready from Day 1.

Practical Learning

Industry-Aligned Curriculum

Students follow a curriculum built around real industry needs and current tech roles.

Faculty from top tech companies

Students learn directly from engineers who have worked in top tech companies in the past.

Projects from Day 1

Students build industry-level projects that strengthen their resume and portfolio.

Personal Learning

1:1 Mentorship

Students receive 1:1 mentorship from experienced engineers to prepare for top company placements.

Student Success Manager

Each student is supported by an on-campus success manager to track progress and resolve academic or career doubts.

Entrepreneurship Support

Students with startup ideas get access to dedicated funding and guidance from experienced CEOs, CTOs, and CXOs.

Purpose-Driven Learning

1-Year Paid Internship

In the final year, students work in real industry roles to gain hands-on experience and become job-ready.

500+ Hiring Partners

BST has tie-ups with 500+ companies that actively hire and refer students for tech roles.

Holistic Development

Along with academics, BST focuses on wellness, sports, and personality development for all-round growth.

4 years B.Tech in Computer Science & AI

Right Degree + Right Skills = Real Career Security

At Bosscoder School of Technology (BST), students graduate with a 4-year, UGC-approved B.Tech degree in Computer Science & Artificial Intelligence.

This is the most widely accepted and trusted engineering degree for students who want to build a long-term career in technology. It is recognized by universities, companies, government bodies, and global institutions in India and abroad.

While skills are important, a strong formal degree remains the foundation of a serious engineering career. That is why BST is built around a B.Tech program, so students don't have to choose between practical skills and long-term security. The right degree is as important as the right skills for a future in tech. A degree gives you eligibility, and skills give you employability.

After Class 12, many students consider alternatives like BCA or B.Sc (Computer Science). These options may teach some programming, but they do not offer the same career stability or opportunities as a B.Tech.

In engineering, a B.Tech is not just a qualification. It is the minimum requirement for many of the opportunities students aim for later in life.

At BST, You Will Graduate with a B.Tech Degree in Computer Science & AI

UGC Approved, AICTE approved, accredited by NAAC, and rated by K-SURF, making this B.Tech degree valid and trusted across India and beyond. Delivered in partnership with S-VYASA (Deemed-to-be University), Bengaluru.

Doors Open After B.Tech

One B.Tech Degree = Many Career Paths

A B.Tech degree isn't just about today's job, It's about keeping every major option open for tomorrow.

Placement At Top Tech Company

- Software Engineer, AI Engineer, Data Scientist
- Eligibility for top product-based companies
- Faster career progression & leadership roles

Higher Education

- M.Tech / MS (India & Abroad)
- MBA from top institutes
- Research & PhD pathways

Entrepreneurship

- Build your own startup or product with a strong technical foundation
- Freedom to innovate, scale ideas, and create real-world impact

Government & PSU Opportunities

- GATE-based PSU roles (NTPC, ONGC, BHEL, IOCL, etc.)
- Engineering roles in central & state government
- Technical officer & research positions

Global Recognition

- Accepted for international education & jobs
- Valid degree for visas, evaluations & equivalency

Why B.Tech Is Stronger than BCA or BSc (CS)

B.Tech is needed because it teaches full engineering depth systems, architecture, math, and core technical foundations.

Companies, PSUs, and international universities require this level of qualification for serious tech roles.

That's why B.Tech offers stronger and more stable career opportunities than BCA or B.Sc.

Opportunity / Path	B.Tech (Bosscoder School of Technology)	BCA/BSc	Others
Software Engineer Roles	✔	Limited	Limited
PSU/Govt Engineering Jobs	✔	✖	✖
MS/Higher Studies Abroad	✔	Limited	Limited
Global Work Visas	✔	✖	✖
Long Term Career Growth	✔	Limited	Limited

At BST, Education Meets Industry

Bosscoder School of Technology vs Traditional College.

Aspect	Bosscoder School of Technology	Traditional Colleges
Degree Value	UGC approved B.Tech degree + industry-ready skills	Degree without strong job outcomes
Modules	Latest technologies and industry-relevant modules	Outdated subjects
Instructors	100+ industry leaders as mentors and instructors	Faculty without industry experience
Approach	Hands-on, project-based learning from Day 1	Theory-focused learning
Job Readiness	1-year mandatory Industry Experience	Graduates unprepared for jobs
Curriculum	Future-ready curriculum updated every year	Curriculum designed decades ago

A Curriculum That Brings You Closer to Industry Every Year

The BST curriculum blends academic depth with industry immersion, ensuring students graduate with the ability to build, solve, and lead

Year 1 - Foundations

Students begin by strengthening their fundamentals in coding, web development, and AI fundamentals, while focusing on problem-solving & soft skills, ensuring a balanced start to their engineering journey through hands-on learning.

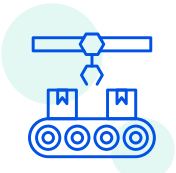

Year 2 - Core Systems & Deep Dive

Deep dive into core CS and AI systems, including databases, operating systems, networks, backend engineering, and machine learning, while developing strong system-level thinking through practical applications and industry level projects.

Year 3 - Specialize

Students choose their area of specialization Software Engineering or Artificial Intelligence and deepen their skills under the guidance of industry mentors.

Year 4 - Industry Immersion

In the final year, students transition fully into industry through paid internships, industry-sponsored projects, or by working on their own startup ideas. This year is focused on real-world impact, professional experience, and converting skills into real outcomes.

Year 1 - Building Fundamentals

Goal: Develop a solid foundation in CS and AI for advanced topics

Learn programming and problem-solving to build a strong coding foundation. Build websites and frontend applications through hands-on web development. Understand data, statistics, and AI fundamentals that support modern technology.

Duration: 12 Months | 4 Terms of 3 Months each

Term	Topics to cover
TERM 1	• Introduction to Computer Programming • Web Development 1 • Mathematics for Data Science • Micro MBA (Soft Skills)
TERM 2	• Programming for Problem Solving • Web Development 2 • Mathematics for Data Science 2 • Micro MBA 2
TERM 3	• Data Structures and Algorithms 1 • Frontend frameworks • Probability and Statistics for Data Science • Universal Human Values
TERM 4	• Data Structures and Algorithms 2 • Web Development Project • Data Analytics 1

Hands-on Projects You'll Build in Year 1

Build an Interactive Game

Students will build a game like Tic-Tac-Toe, Algorithmic Visualiser, Quiz Battle game

Skill Used : Java, Data Structures & Algorithms

Create a Coffee Machine Counter

Design a coffee shop billing system that counts number of coffees

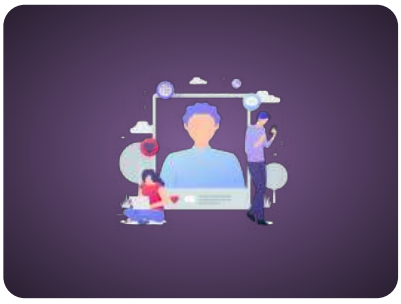

Skill Used : HTML, CSS, Image Processing Library

Develop your Personal Portfolio

Create your own website and update it with projects to showcase to the recruiters

Skill Used : Git & Terminal, HTML, CSS, JavaScript

Build a Social Media Platform

Work on frontend development of a social media platform

Skill Used : React.js, TypeScript, Testing, Next.js, Firebase

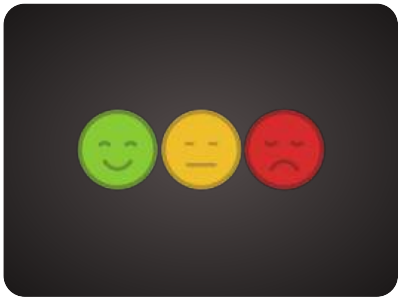

Hands-on Projects You'll Build in Year 1

Build an E-commerce app

Work on frontend development of an e-commerce app for buying and selling products.

Skill Used : Data Structures & Algorithms, React.js, Next.js, Firebase

Social Media Analyser

Analyse Social media posts as hateful, positive or negative

Skill Used : Probability & Statistics, Prompt Engineering

Email Spam Classifier

Classify if an email is a genuine email or spam email using Python Libraries

Skill Used : HTML, CSS, JavaScript, Python

Your 24×7 Personal Lab: Apple MacBook

Every student will receive a Macbook for an impressive and collaborative learning experience.

Year 2 - Core Systems & Deep Dive

Goal: Deepen the foundations built in Year 1 by mastering core Computer Science and AI systems.

Students dive into databases, operating systems, networks, backend engineering, and machine learning to understand how real software systems are designed, built, and scaled through hands-on applications and industry-style projects.

Duration: 12 Months | 4 Terms of 3 Months each

Term	Topics to cover
TERM 1	• Database management system • Data Analytics 2 • Advanced Java
TERM 2	• Operating System • Classical Machine Learning • Backend Engineering (SpringBoot)
TERM 3	• Computer Networks • Advance Machine Learning • Functional Programming using JavaScript • Finance and Accounting Management
TERM 4	• Linux • Machine Learning project • Low Level Design

Hands-on Projects You'll Build in Year 2

Design Database

Design database of Social media apps like Instagram, Snapchat and e-commerce apps like Amazon, Flipkart, Zepto

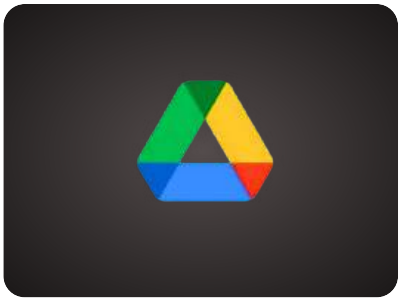

Skill Used : DBMS, SQL

Create a Ride sharing matching system like Uber

Create a ride sharing system like Uber

Skill Used : SQL, Advanced Java, Low-Level Design (LLD)

Create a system like Google drive

Create a system to upload files like Google drive

Skill Used : SQL, Spring Boot, Linux

Build Spellchecker and grammar suggestion system

Build a NLP based spell checker and grammar suggestion system

Skill Used : Advanced Excel, Power BI / Tableau, Python, Machine Learning

Hands-on Projects You'll Build in Year 2

Data Analysis Case Studies

Analyse real world datasets (eg Netflix, Fitbit etc) in Kaggle

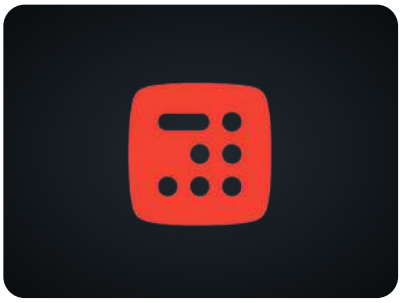

Skill Used : Advanced Excel, Power BI / Tableau

Text Analysis for detecting AI based fake content

Analyze text to detect AI-based fake news

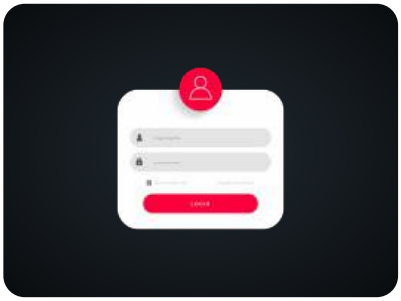

Skill Used : SQL, Advanced Excel, Python

News Recommendation Application

Create a new recommendation app like Inshorts

Skill Used : SQL, Machine Learning

Login Authentication System

Create a login authentication system

Skill Used : React.js, Python, Machine Learning

Year 3 – Specialization

Goal: Help students specialize in their chosen domain whether software engineering or Data & AI.

After two years of learning and exploration, students clearly understand where their interests lie. In Year 3, they choose their preferred domain (software or AI) and deeply specialise in it, building advanced skills and projects aligned with their career goals

Duration: 12 Months | 4 Terms of 3 Months each

If you choose Software Specialization

TERM 1	• DevOps and Cloud Computing
TERM 2	• Data Engineering
TERM 3	• Advanced High-Level Design (HLD)
TERM 4	• Application Security

If you choose AI & ML Specialization

TERM 1	• NLP & GenAI
TERM 2	• Applied AI and ML
TERM 3	• ML System Design and LLM Ops
TERM 4	• AI Engineering

Hands-on Projects You'll Build in Year 3

Hate speech / Toxic comment detection and deletion

Detect and automatically remove toxic or abusive content using AI.

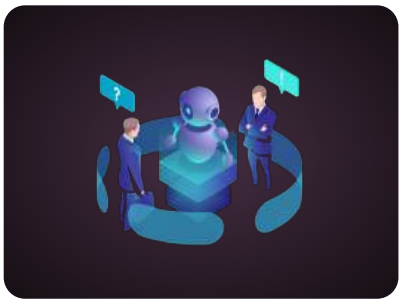

Skill Used : NLP, Generative AI

Build a chat system like ChatGPT

Build an AI-powered conversational chatbot using LLMs.

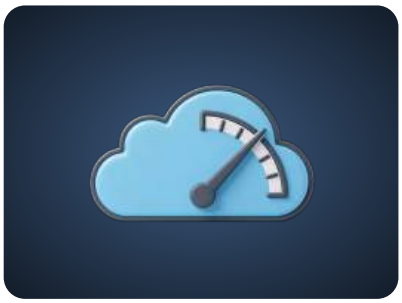

Skill Used : Cloud Computing (AWS / GCP / Azure), Generative AI, LLM Ops, AI Engineering

Create an AI interviewer

Conduct automated interviews with real-time evaluation and feedback.

Skill Used : High-Level Design (HLD), Application Security, LLM Ops

Distributed Rate Limiter as a service

Create a rate limiter using Redis, Kubernetes

Skill Used : Docker, Kubernetes, CI/CD, Cloud Computing (AWS / GCP / Azure)

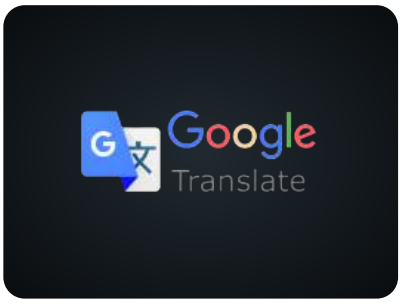

Hands-on Projects You'll Build in Year 3

Recommendation system

Suggest personalized content using user behavior and ML models.

Skill Used : High-Level Design (HLD), Language Processing (NLP)

Create a system for translation like Google translate

Translate text across multiple languages using AI models.

Skill Used : Advanced SQL, Generative AI, AI Engineering

Scalable & Secure Job matching platform like LinkedIn Jobs

Create a real scalable job matching platform like LinkedIn and onboard recruiters and students

Skill Used : Docker, CI/CD, High-Level Design (HLD)

Bosscoder has already transformed

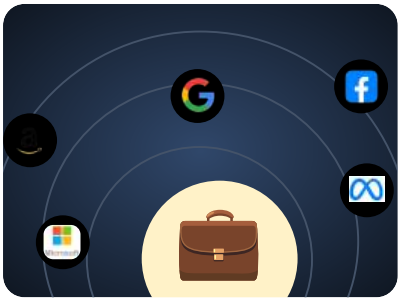

10,000+ careers

We have **500+** hiring partners.

Year 4 – Industry Immersion

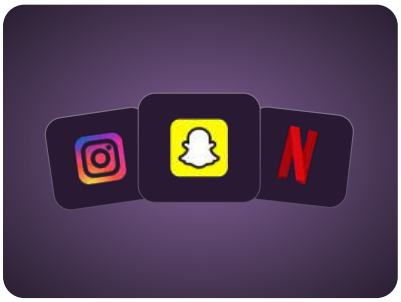

Goal: Familiarise students with how the real industry works before they graduate.

In the final year, students choose one of three paths based on their goals. They can gain paid internship experience, work on industry-sponsored projects with companies like Amazon or Microsoft, or build their own startup idea after approval from BST team.

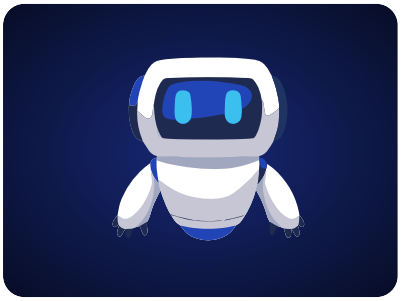

Paid Internships

Gain real-world experience through short-term or long-term paid internships. Work in professional teams, contribute to live products, and understand how companies operate at scale.

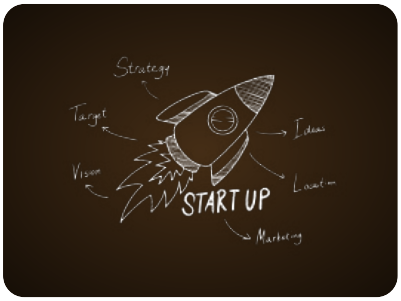

Industry sponsored projects

Collaborate on real business problems sponsored by leading technology companies. Work with industry mentors and deliver production-grade solutions.

Innovation Lab projects

Join specialised labs focused on Robotics, AI/ML, IoT, and emerging technologies. Experiment, prototype, and build cutting-edge solutions.

Startup Incubation

Develop and launch your own startup idea with guidance, mentorship, and technical support from the BST team.

Holistic Curriculum At BST

Along with a strong Computer Science & AI curriculum, the BST program also includes essential non-technical and value-based courses, as recommended by national education guidelines.

These courses ensure students develop ethical thinking, social awareness, and personal well-being, alongside technical excellence.

Part of BST's Holistic Academic Model:

Sports & Fitness

All major sports facilities to keep students active, healthy, and stress-free.

Human Values & Professional Ethics

Ethical decision-making, integrity, and responsible leadership

Yoga & Wellness

Mental focus, physical well-being, and stress management

Environmental & Social Awareness

Sustainability, social responsibility, and real-world impact

Our Hands-On Learning Ecosystem

Project-First Learning

Every concept is followed by real projects, helping students build apps and systems from DAY 1.

Integrated Labs & Practice

Concepts are always paired with lab sessions, tools, and real-world use cases, so learning never stays theoretical.

Mentorship from Practicing Engineers

Students learn directly from engineers through reviews, guidance sessions, and feedback.

Hackathons & Buildathons

This helps students think fast, collaborate, and solve real problems under pressure.

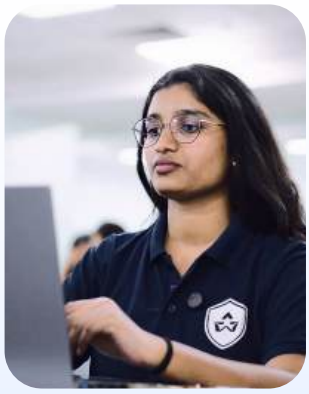

Industry Talks & Fireside Chats

Frequent interactions with founders, CTOs, and senior engineers help students understand how the tech world really works.

Gamified Learning Tracker

Stay motivated with BST's interactive progress dashboard track goals, projects, and milestones in real time.

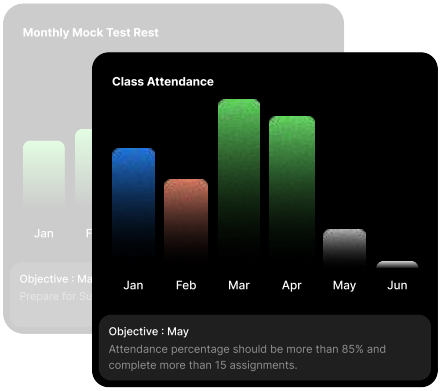

Learning Management System (LMS)

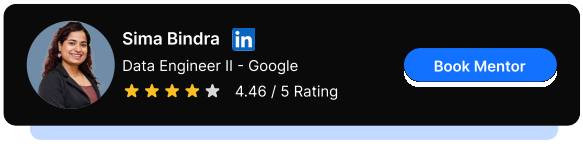

Your Complete Learning Command Center

An all-in-one platform designed to keep students, mentors, and parents aligned with real-time learning insights, progress tracking, and everything needed to stay ahead throughout the 4 years of the B.Tech journey.

Monthly Progress Overview

Track academic consistency with a clear view of attendance, assignments, projects, and mock tests. Students stay accountable while parents stay informed.

Book Your Mentorship Session

Schedule 1:1 sessions with mentors to discuss doubts, career guidance, or project support whenever you need it.

Upcoming Events & Opportunities

Stay updated with hackathons, workshops, tech talks, and career opportunities happening across the BST ecosystem.

Live Class Recordings

Missed a class or want to revise a concept? Access recordings of every live session anytime, ensuring learning never stops.

Built for Complete Transparency

From learning progress to mentorship and opportunities, the LMS ensures students stay accountable and parents stay confident about their child's journey.

How We Teach

We Help You Become Industry Ready

At BST, learning goes far beyond textbooks and classrooms.

Every concept is explored through hands-on application, every skill is practiced through real projects, and every student learns by building, experimenting, and creating.

Because learning becomes powerful only when it turns into real-world impact.

Life @ BST

A glimpse into how our students learn, build, and grow through a campus life where they explore, make mistakes, try again, and move forward. Every day at BST helps shape both their skills and their personality.

An Urban Campus In Bengaluru - Tech Capital of India

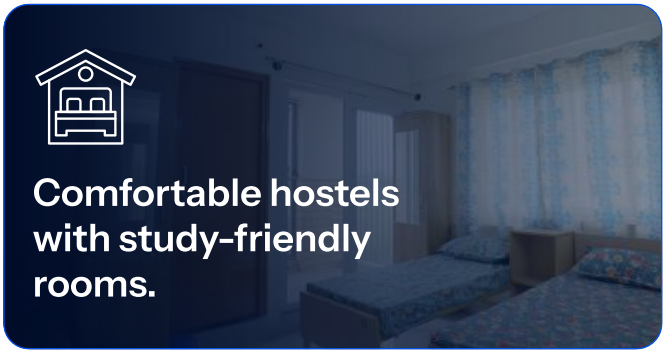

In the heart of India's Silicon Valley, BST offers a campus designed like a real tech environment modern labs, modular spaces, and constant exposure to industry and startups. Students will experience the deep-tech ecosystem partnered with S-Vyasa university.

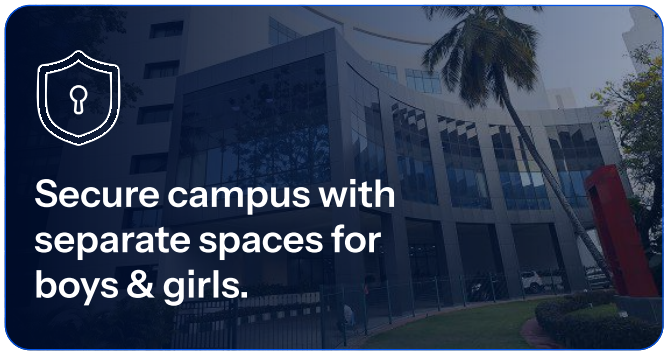

- Inside a Tech Park Ecosystem
- Industry Engagement & Professional Exposure
- Student-Led Clubs & Opportunities
- Career Development & Engagement
- Wellness, Sports & Personal Development

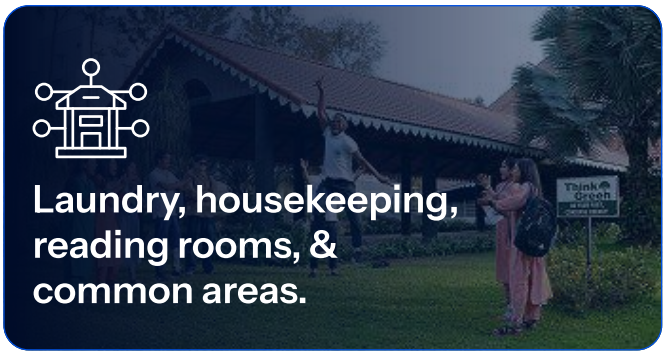

BST hostel

A safe and lively home away from home

Comfortable rooms, high-speed WIFI, study lounges, and secure residential spaces, clean & well-equipped hostel environment with all essential amenities. With healthy food and 24/7 support, students feel safe, focused, and truly at home throughout their B.Tech journey.

Hostel will be about friendships, clubs, fitness, events, and discovering yourself.

Facilities That Support Your Growth:

- Healthy meals and well-maintained dining halls.
- Indoor & outdoor activity zones.
- Dedicated student success managers for academic & personal support.
- Collaborative Study & Learning Spaces
- High-Speed Digital Connectivity
- Community & Interaction Spaces

Student Led Clubs

Competitive Programming

Focuses on data structures, algorithms, and coding contests. Students practice competitive programming and participate in hackathons to strengthen problem-solving and technical skills.

Robotics & Drone Club

Students explore robotics, automation, and drone technology through hands-on projects, hardware building, and participation in robotics competitions.

AI&ML club

Dedicated to artificial intelligence and machine learning. Members work on ML projects, participate in Kaggle competitions, and attend AI-focused workshops.

Open Source club

Encourages students to contribute to open-source projects, collaborate with global developers, and gain experience in real-world software development.

Media Club

Focuses on content creation and public speaking. Students develop communication, storytelling, and digital media skills.

Cultural Club

Promotes creative expression through dance, music, theatre, and photography while enriching campus life.

Partnered With

S-VYASA University

Academic Credibility Meets Industry Relevance.

In collaboration with S-VYASA University, BST offers a UGC-approved B.Tech degree that's backed by Bosscoder's real-world curriculum and corporate partnerships.

Student Selection Process

Merit-based process through BSAT (Bosscoder Scholastic Admission Test) and personal interview to identify driven learners.

Eligibility Criteria

Open to students from all academic backgrounds passionate about technology.

- Completed class XII with Physics, Chemistry and Mathematics from a recognized board in 2025 or 2026.
- Cleared the Online Proctored Test : BSAT (Bosscoder Scholastic Admission Test)
- Cleared the personal Interview round
- Demonstrated skills, knowledge and passion for technology

Criteria	Weightage
Online Proctored Test	**50%**
Personal Interview	**50%**

Admission Process

Bosscoder Scholastic Admission Test (BSAT) is official test to get into Bosscoder School of Technology.

Sign up on the BST Website

Complete the online application and ensure you meet eligibility requirements. Submit necessary documents.

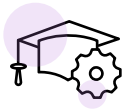

Take BSAT : Online Test

It is a 120-minute online test on logical reasoning and mathematics.

1:1 Interview

If you get shortlisted in BSAT then personal interview with one of the BST faculty.

Engineering Preview & Campus Walkthrough

You can experience BST's engineering ecosystem and experience campus life through a guided visit

Admission Letter

Receive an admission letter upon successful completion of all steps.

Enrollment

Follow enrollment instructions in your admission letter and submit required documents and fees.

BST prepares You For 3 Outcomes

| Placements
| Entrepreneurship
| Higher studies

Placements

Top Engineers from Top Tech Company

BST focuses on Three key areas to help students get placed:

1. Strong portfolio and skill set

Students build industry-relevant projects from day one and gain one year of industry exposure, making them placement-ready.

2. Access to the right opportunities

BST connects students with 500+ hiring partners through internships, referrals, and structured placement drives.

3. Interview readiness and guidance

Through structured preparation, mock interviews, and continuous mentor feedback, BST helps students convert opportunities into real offers.

+500 hiring partners

We don’t prepare students to apply for jobs. We prepare them to earn them.

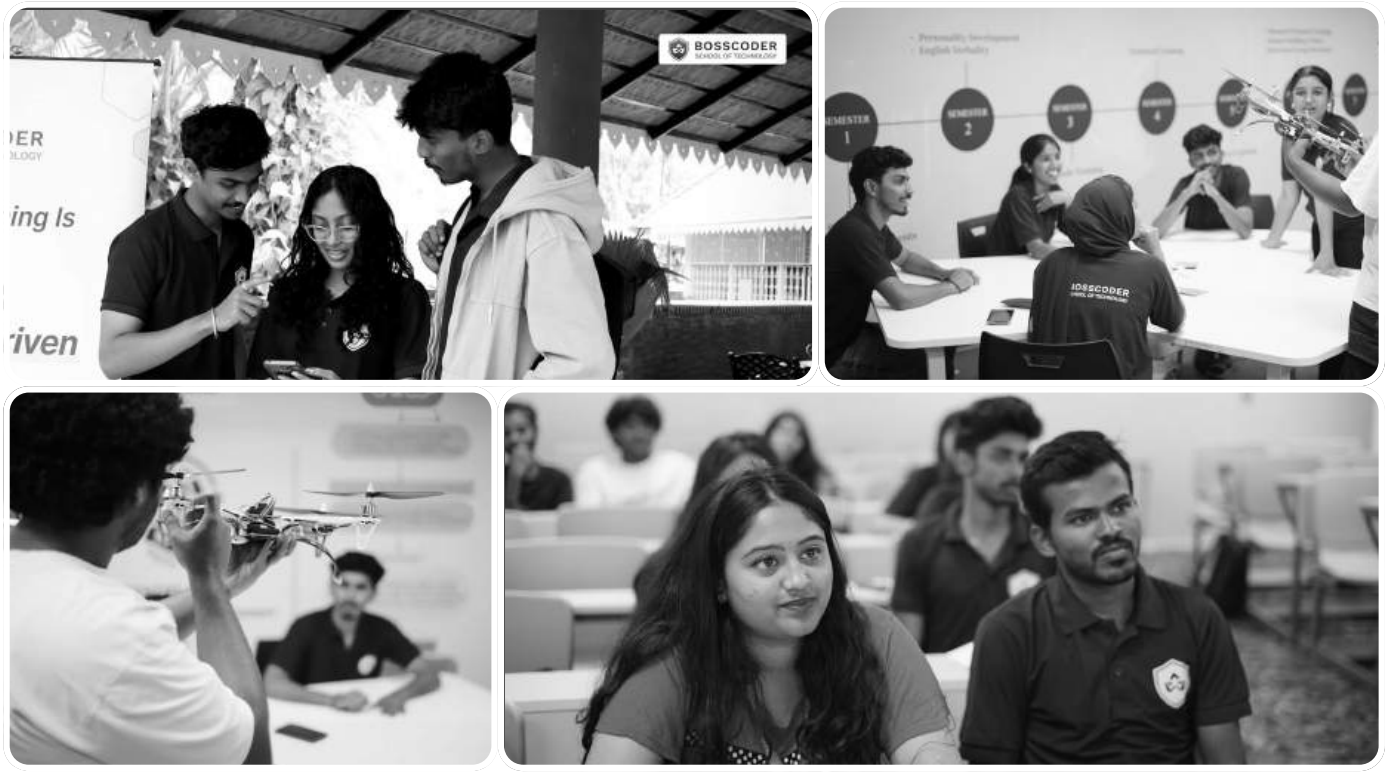

Entrepreneurship

Industry Immersion & Startup Studio

At BST, students don’t just do internships, they build real solutions that create real impact.

Through our Startup Studio, every learner gets the space, mentorship, and support to develop ideas, pitch them, and turn them into working products. Students work directly with startups, industry partners, research labs, and even launch their own companies all before graduating.

Here, innovation isn’t a final-year formality. Students build their dream projects with support from platforms like the Innovation Lab.

Innovation Lab

Piyush Goyal
Minister Of Commerce And Industry Of India

"China is moving rapidly in deep tech. It's time for Indian startups to focus on real innovation and core technologies.

India must strengthen its deep-tech ecosystem & move beyond consumer tech to become true global leaders".

100k Retweets **50k** Quote Tweets **300k** Likes

Our Innovation Lab brings this vision to life. Here, students explore deep-tech fields like AI, Robotics, Smart Systems, AR/VR, and cutting-edge engineering challenges guided by mentors from top tech companies.

They get access to:

- Research Projects (Industry + Academic)
- Prototype Development Support
- Hackathons & Builder Sprints
- Incubation Pathways to turn ideas into real startups

At BST's Innovation Lab, students don't wait for the future, they start building it.

10+
Startup Ideas & Prototypes Expected To Be Built By BST Students

Founders, CXOs & Startup Leaders Engaged actively

Higher Education

Higher Education Pathways Enabled by the BST Degree

The 4-year B.Tech Degree at Bosscoder School of Technology is designed to keep higher education pathways open in India and internationally.

The degree meets formal academic requirements, enabling students to pursue postgraduate studies and competitive examinations without eligibility constraints.

Pathway	Where	Eligibility Status	Academic Requirement
Postgraduate Programs (M.Tech / MS / MBA)	India/abroad	**Eligible**	Recognised B.Tech degree
Civil Services & Government Examinations	India/abroad	**Eligible**	Degree from a recognised university
Master's Programs (MS)	India/abroad	**Eligible**	4-year undergraduate degree / 16 years of education
Business Schools (MBA)	India/abroad	**Eligible**	Equivalent Bachelor's degree

Student Led Projects

BST students build industry-relevant projects during college, or turn their own ideas into real working solutions.

Radar-Based Object Detection System

The student developed a radar-style system using an Arduino, ultrasonic sensor, and servo motor to detect nearby objects and visually represent their positions in real time.

AI-Based Air Pollution Monitoring System

The student created an air quality monitoring system using gas sensors to measure pollution levels and display the Air Quality Index (AQI) through LED indicators for easy interpretation.

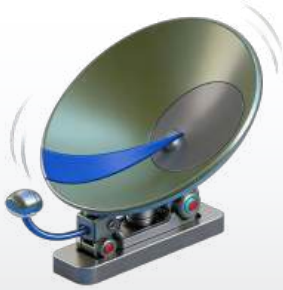

Object Detection System for Blind Assistance

Designed and built a system using Arduino and ultrasonic sensors to detect nearby objects within a defined range and alert the user, helping visually impaired individuals navigate more safely.

Automated Alert & Buzzer System

The student implemented an alert system using buzzers and servo motors to trigger sound-based notifications when predefined conditions are met.

AI Pollution Checker using Arduino, LCD, and Sensor

An AI Pollution Checker using Arduino is a simple and effective system used to monitor air quality in real time. It uses an Arduino board, an air quality sensor (like MQ-135), and an LCD display to show pollution levels.

Fee structure

The hostel fee is subject to periodic revision in line with inflation. During the 4th-year Industry Immersion phase, students who choose not to stay on.

Part A - BST Total Fee

Year	Admission Fees	BST Fee
Year 1	₹ 25,000/-	₹4,25,000/-
Year 2	-	₹5,00,000/-
Year 3	-	₹5,00,000/-
Year 4	-	₹3,50,000/-
Total	₹ 25,000/-	₹17,75,000/-

Part B - Hostel Fee

Year	Triple Sharing	Double Sharing
Year 1	₹1,10,000/-	₹1,40,000/-
Year 2	₹1,10,000/-	₹1,40,000/-
Year 3	₹1,10,000/-	₹1,40,000/-
Year 4 (Industry Immersion)	-	-

Part C - Mess Fee

Year	Cost (Year 1- Year 3) * 4th year Industry Immersion
Year 1	₹50,000/-
Year 2	₹50,000/-
Year 3	₹50,000/-
Year 4	-

Students who wish to stay on campus during this period for academic projects may do so with prior approval. No hostel fee is applicable during the fourth-year industry immersion if the student is staying off-campus.

Hostel accommodation is available in triple-sharing rooms at ₹1.1 lakh per year and double-sharing rooms at ₹1.4 lakh per year. Meals include breakfast, lunch, and dinner, with vegetarian and non-vegetarian food prepared separately.

The mess facility is optional and must be opted for at the beginning of the academic year.

A one-time, refundable security deposit of ₹25,000 is applicable. An optional bus facility is available at ₹15,000 per semester (6 Months) for students who choose to use transport services.

BST tuition fees are payable annually, hostel and mess fees are charged annually, and the optional bus fee is payable on a semester-wise (half-yearly) basis.

Refund Policy
Please visit website for complete details. Click Here!

Scholarships & Evaluation Criteria

Talent Deserves Opportunity

Our scholarship framework is designed to identify high-potential students and support them through a fair, transparent, and merit-driven evaluation process.

Scholarships at BST are awarded to students who demonstrate strong academic capability, problem-solving mindset, and the motivation to build a long-term career in technology.

All scholarships are reviewed and approved by the, based on clearly defined academic and financial parameters.

Merit-based Scholarships

Merit-based scholarships are awarded to students with strong academic performance and demonstrated excellence.

Evaluation parameters include:

- Performance in BSAT (Bosscoder Scholastic Admission Test).
- Class X & XII academic records.
- Achievements in Olympiads, coding competitions, hackathons, or technical projects. These scholarships aim to reward academic excellence and technical aptitude.

Need-based Scholarships

Need-based scholarships are given to students who perform well academically but come from families with limited financial resources. These scholarships support students whose family income is below ₹5 lakh per year and who genuinely need financial help.

Documents required for income verification:

- Fee receipt from the student's previous school (used to verify financial background).
- Proof of family income.

How to Apply for a Scholarship?

When you appear for BSAT which is official test for Bosscoder School of Technology (BST). Make sure you fill the detailed profile form on the dashboard, with all the academic and financial details. This form will decide the amount of scholarship being given to you.
